

Structure and Error Handling Lesson 11 – Expert Coding in Minecraft with JavaScript

1.	What is the significance of events in programming?
2.	What is event-driven programming, and how does it differ from sequential control flow?
3.	What is the purpose of program documentation?
4.	What are the key elements and purposes of program documentation?
5.	What are comments?

CODING IN MINECRAFT

6. What are the two ways to do comments in JavaScript?

7.	Describe the	following	types of	errors in	code:
1.	Describe the	Tollowing	types of	errors in	COC

- a. Logic error –
- b. Syntax error –
- c. Run-time error –
- d. overflow error –
- 8. What can happen if a program with a logic error is run?

CODING IN MINECRAFT

9.	Describe	the	followin	ig l	ogic	errors:

		C 11		
а	Incorrect	(onditions	or	Expressions –
u.	1110011001	Conditions	\circ	LAPICSSICIIS

c. Misunderstanding Operator Precedence –

10. What will happen if there is a syntax error in the code?

11. What will happen if there is a runtime error in the code?

CODING IN MINECRAFT

12. List an	d describe examples of runtime errors.
13. Descri	be the following methods for finding and correcting errors
a.	Test cases –
b.	Hand tracing –
C.	Visualizations –
d.	Debuggers –

e. Adding extra output statement –

In Game Assessment References:

**For Activity Assessments, students will build the code completely on their own. They need to press C at the activity area and create a new project. When complete, they will save their MakeCode file and upload it to the portal for grading.

Activity Assessment 1:

Write code that has the agent till a 4×5 area of the ground and then plant sunflowers. Use functions and a chat command and write comments describing what each piece of code does. For your functions, have one named till and one named plant. For the chat command, call it farm. You should have a multi-line comment at the beginning that describes what the entire code should do and then at least 3 different single line comments. 2 that describe the functions and 1 that describes the chat command.

Activity Assessment 2:

Import the starter code and fix the errors. There are four errors.

Final Assessment: Mini Game:

This game is intended to do the following: The player will control the agent in the chat with the words forward, right, left, back, and up. When the agent moves, it will destroy forward and collect the diamond blocks. Each time the agent collects a diamond, the variable diamond increases by 1 and the player will say how many diamonds were collected. There is a timer that counts to 60 seconds. At the end of 60 seconds, the game will let you know how many diamonds the agent collected and assign the player either a slow miner, pretty quick miner, or fast miner.
